PRESS RELEASE 3 — AHU Cosmology Reveal

FOR IMMEDIATE RELEASE AHU Cosmology Reveal Scheduled for November 10, 2026 in San Francisco–Silicon Valley

San Francisco–Silicon Valley — November 10, 2026 — The Beyond Institute for Faith and Science Discovery announces the official reveal of the **Ajiake Hydrodynamic Universe (AHU) Cosmology**, a breakthrough scientific and metaphysical framework created by **Matthew Omaye Ajiake, PhD**. The AHU Cosmology provides the structural pathway that brings **General Relativity and Quantum Physics together**, offering new clarity on how and why the natural universe exists. The reveal will introduce:

- Pathways to addressing **74 scientific questions** modern sciences have not been able to resolve
- A framework that improves humanity's current **5% understanding of the universe's materials**
- A model that improves our **2% understanding of the Human Genome**
- A hydrodynamic structure that explains identity, formation, and expression across all scales of existence

The AHU Cosmology positions itself as the next frontier of scientific discovery. The next generations of Nobel Prize winners in the sciences will be those who take this cosmology seriously and pursue its unanswered questions through its hydrodynamic structure.

A global press conference will be held in San Francisco–Silicon Valley with scientific media, academic institutions, and corporate research partners.
